SCIENTIFIC AGRICULTURE

LA REVUE AGRONOMIQUE CANADIENNE

VOLUME XI

September, 1930 - August, 1931

PUBLISHED BY THE
CANADIAN SOCIETY OF TECHNICAL AGRICULTURISTS AT
OTTAWA, CANADA

Assisted by the National Research Council, the Dominion Department of Agriculture, Macdonald College, Ontario Agricultural College, Manitoba Agricultural College, the Universities of Saskatchewan, Alberta and British Columbia, and the Provincial Departments of Agriculture in Nova Scotia, New Brunswick, Ontario, Saskatchewan and Alberta.

ERRATA

Page 46, Figure 2 upside down.

Page 93, Line 41, sentence beginning "Due to the change in the world level", etc., should read "Due to the change in the world level of all prices beef cattle prices at the bottom of the swing of the present cycle will probably reach the level of 1924". The sentence following should read, "Due to the restricted demand hogs reached the peak of the cycle somewhat sooner than the writer anticipated".

Page 422, Plates 1 and 2 omitted. These appear on page 487, April, 1931, issue.

Pages 412, 413, Substitute for last three lines on page 412 and first three lines on page 413, the following: "cent, and in twenty years only 99.98 per cent. Thus at the end of twenty years the chances of any particular individual being almost fully homozygous would be very large, and a line commenced from such an individual would, of course, be highly *homogeneous* as well as highly homozygous, that is to say it would have a high degree of purity. By "highly homogeneous" I mean having a very close genetical similarity between plants. There is no test known by which one could determine exactly how homozygous and homogeneous (i.e. pure) a given line is. Theoretically it is quite possible that any given line might be much less *pure* than 99.99 per cent., which is the standard of purity used by the Canadian Seed Growers' Association for registered seed with respect to observable morphological characters of the parent plants".

Page 525, Last two lines of footnote should read "•Average height of plants—culture or filtrate plus the pathogene. °Average height of plants—culture or filtrate alone".
